About Paxton

Paxton is a global brand of integrated IP access control and video intercom solutions with over 30 years' industry experience. Paxton is well positioned to provide both the installer and the end-user with innovative access control solutions designed to create a safer business environment with simple interactive design. From its inception, Paxton has aimed for engineering excellence by designing and manufacturing intelligent and innovative products that meet the challenges and trends of the ever advancing security industry in a global society.

Paxton continues to work hard every day on the basic principles that make us a valuable partner including the continued development of high quality products, customer care, competitive pricing and best in class technical support.

Five Year Warranty and Ultimate Returns Policy

At Paxton Access we are fanatical about customer support. To prove this, we offer an industry high five year warranty that reflects the total confidence we have in the reliability of our products.

Paxton's warranty on most of our products is five years from the date of purchase from Paxton. Paxton Access will replace, at its option, any of the equipment that is guaranteed. Paxton Access will have the option of providing advance replacement by providing a credit for the cost of the equipment.

We want to make life as easy as possible for all installers who are genuinely trying to do the job of installing our products. Our five year warranty and returns policy helps us to do this successfully.

New Products to Guide

- Net2 Entry Panels
- Paxton Reader Range with Genuine HID Technology™

Net2, our networked access control system, comes with a range of single door controllers. The Net2 control units use different means of communication to exchange information with the server PC. They can be mixed and matched on a site, providing an extremely flexible solution.

Net2 plus has a built in TCP/IP interface, meaning it can be plugged directly into the IP network.

Net2 nano needs no direct connection to the network. Instead, Net2 nano uses fully encrypted wireless technology to communicate securely to the server, via a Net2Air Ethernet bridge.

The Net2Air Ethernet bridge is the link between any Net2 wireless product and the Net2 server. The bridge provides communication with up to 10 devices, with an average 50ft (15m) wireless range using Power over Ethernet compatibility.

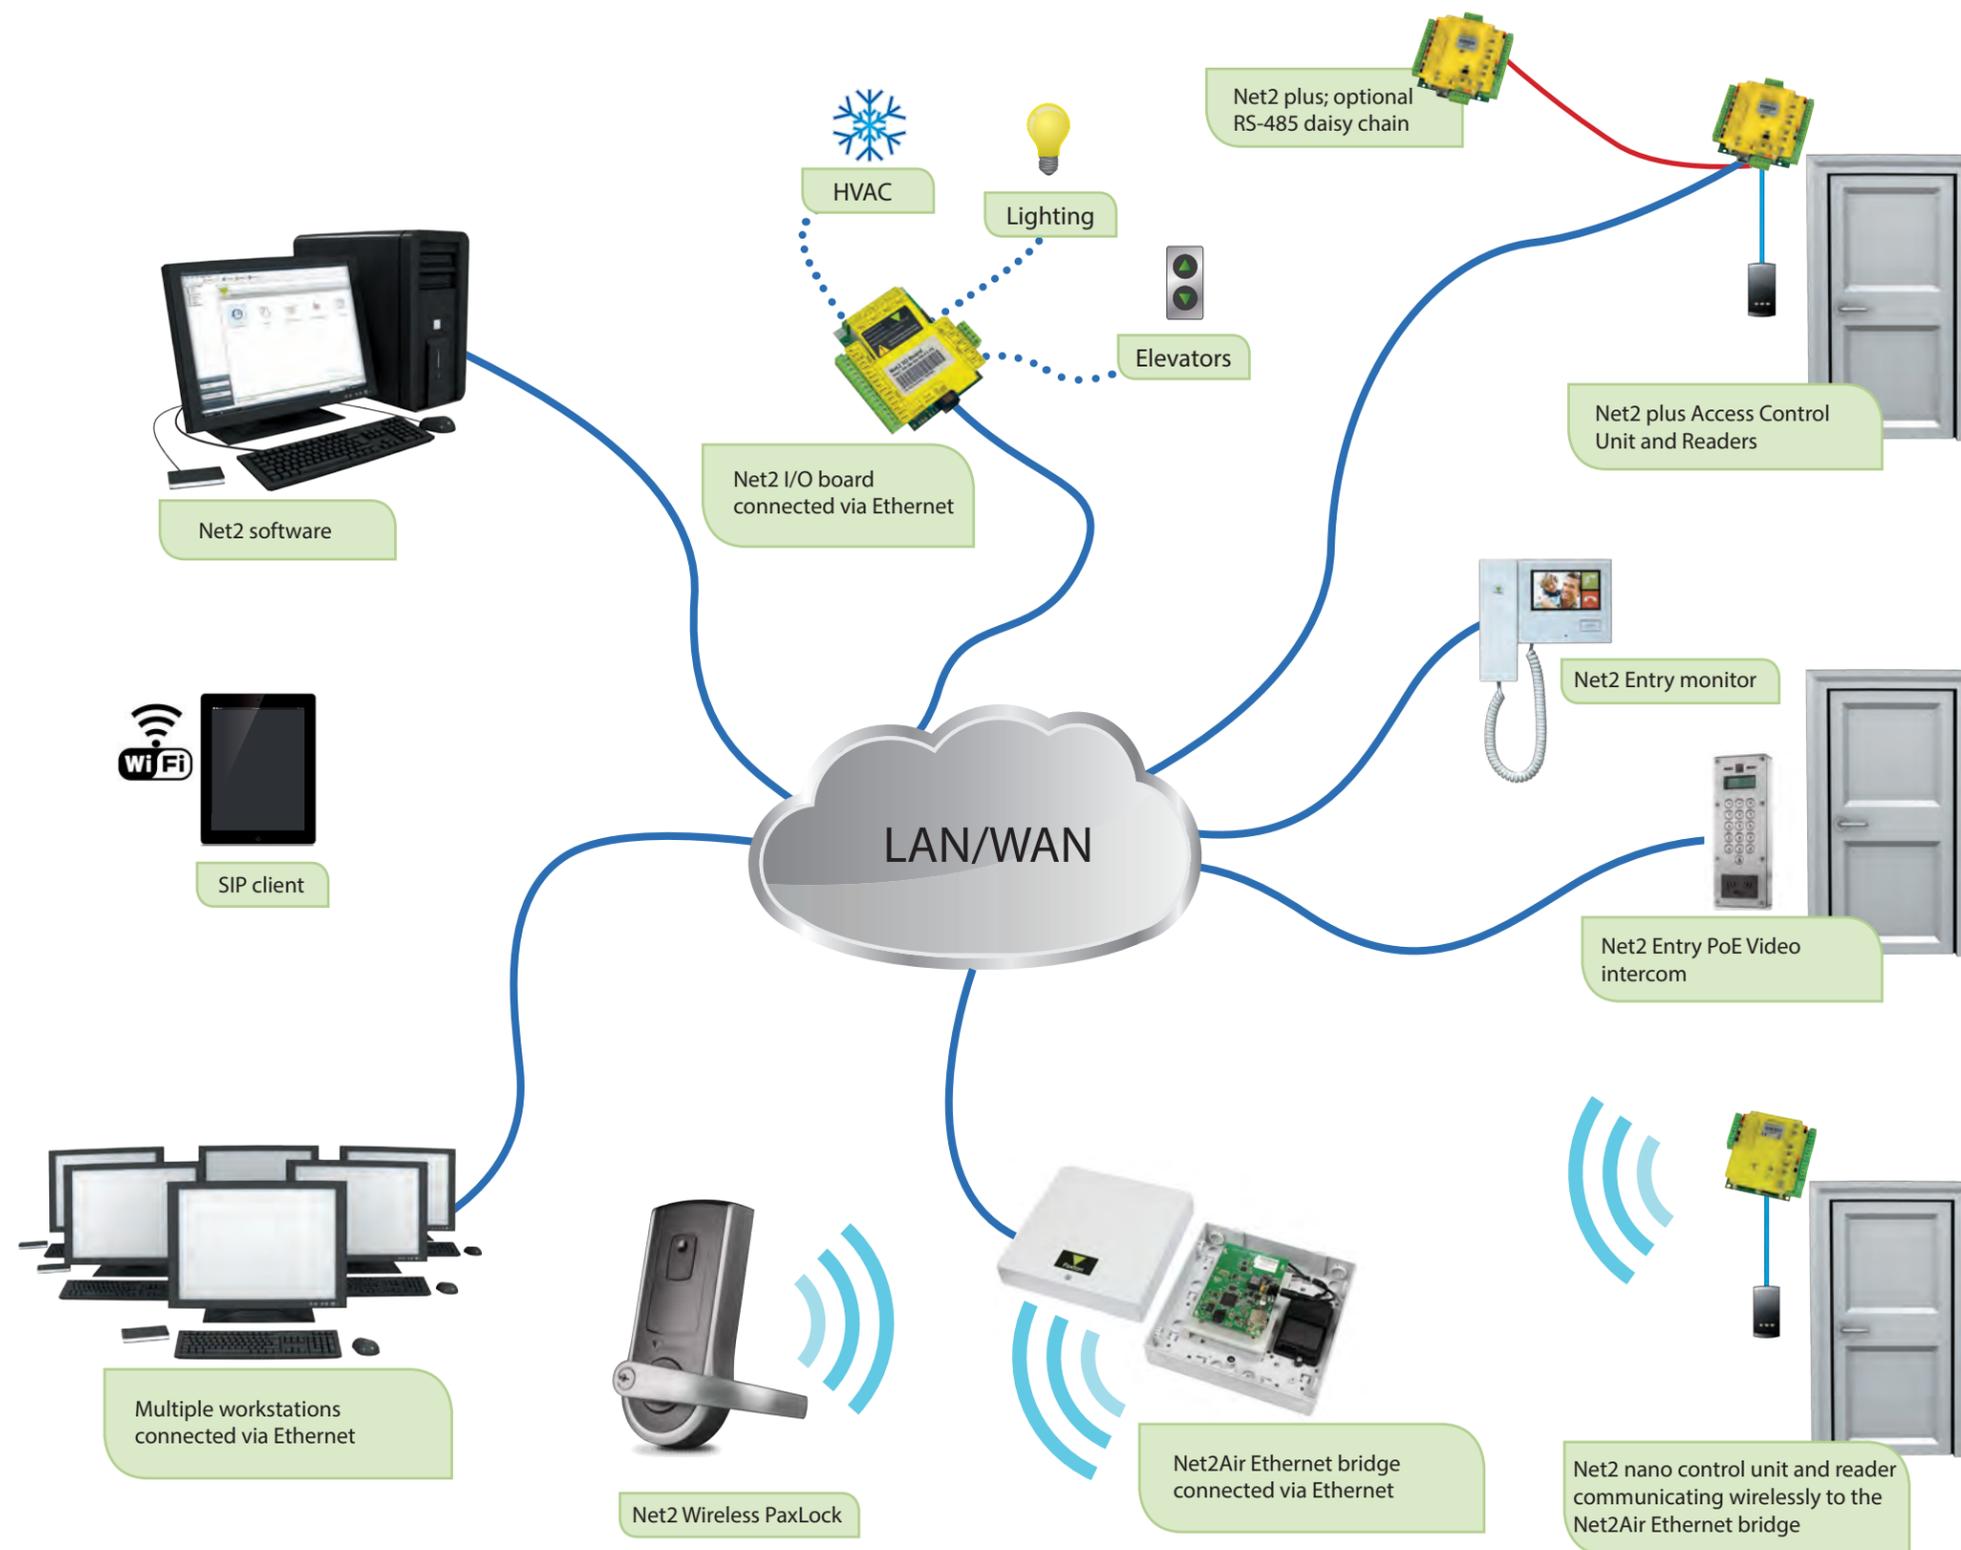

Net2 I/O boards connect directly to the network and allow Net2 to control or receive triggers from many third party devices. This includes elevator control, building control and health and safety applications.

The Net2 server PC runs the software and holds the database, controlling the entire system. The Net2 software can run directly from this machine or from any other PC on the LAN/WAN that runs client software.

Multiple workstation PCs running the client **Net2 software** can be used to administer the system from various locations and by different operators. Operators can be provided with varying levels of access to the software, depending on their role.

The **USB desktop reader** allows an operator using the Net2 server, or any Net2 client PC, to add and delete tokens.

Net2 Entry is a video intercom based door entry system that works standalone or in conjunction with Paxton's leading Net2 access control system for an integrated solution to visitor and employee entrances.

An advanced access control unit with TCP/IP connectivity

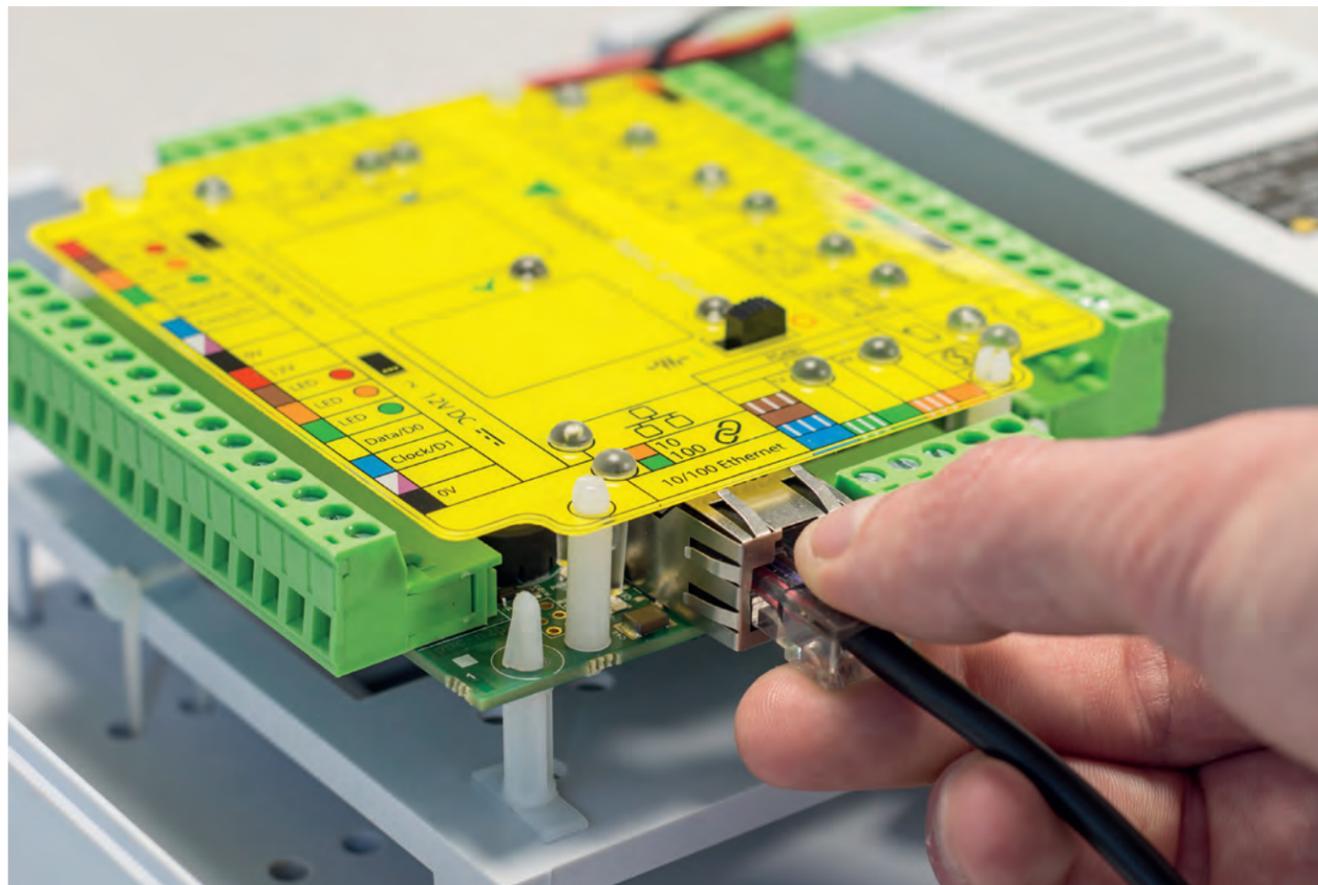

What is it?

Net2 is a PC based security system for controlling access through doors. Net2 allows users to be given access to particular areas at certain times. Because the system is networked, all administration can be done from a central point.

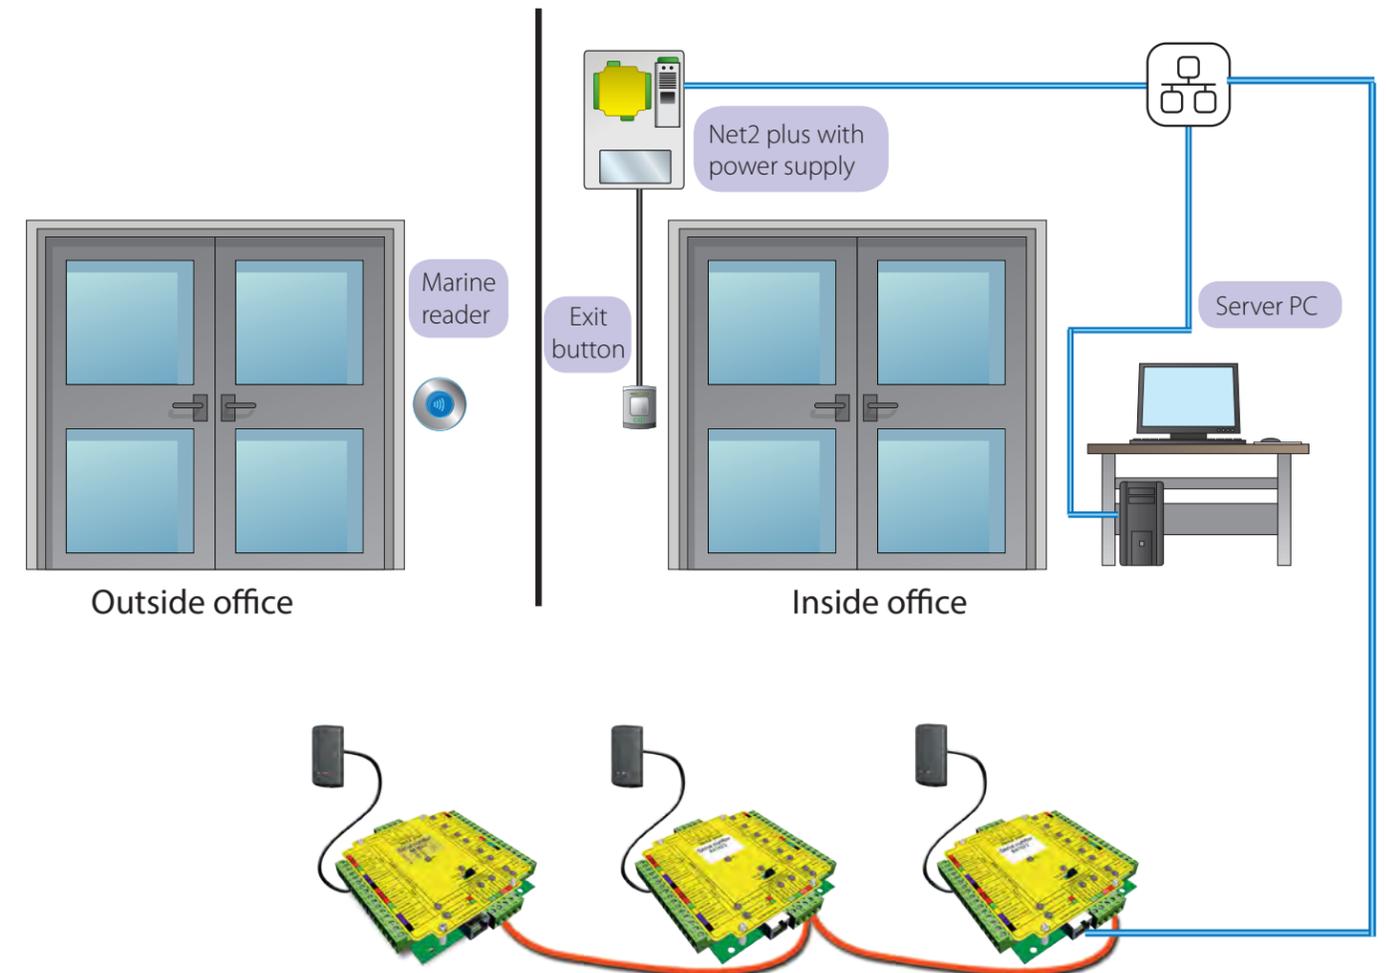

Net2 plus is one of multiple control units for the Net2 system. It is the most advanced control unit, employing the latest technology and offering huge potential for future expansion. As security technology develops, Net2 plus can take full advantage. Using Net2 plus ensures that the investment in access control is safe no matter how the system requirements change.

Net2 plus has on-board TCP/IP to allow direct connection to a computer network. This can save time, money and result in a better, more resilient system. Net2 plus control units can also be connected together using a dedicated RS485 network. This reduces the number of TCP/IP network points required for larger systems.

As with all Net2 control units, Net2 plus is designed to work seamlessly in the event of communications failure. It will continue to permit or deny access to users as appropriate. Once communications are re-established the activity is reported back to the PC.

System Design

Net2 plus Benefits

- Single door networkable access control unit
- Plug into a TCP/IP network using a standard RJ45 plug
- Net2 plus can also connect using RS485
- Net2 plus, Net2 PaxLock and Net2 nano control units can be mixed on a site
- Diagnostic LEDs
- FLASH memory allows easy upgrades
- Use Paxton Access or 3rd party readers

An easy to install access control unit using secure wireless communications

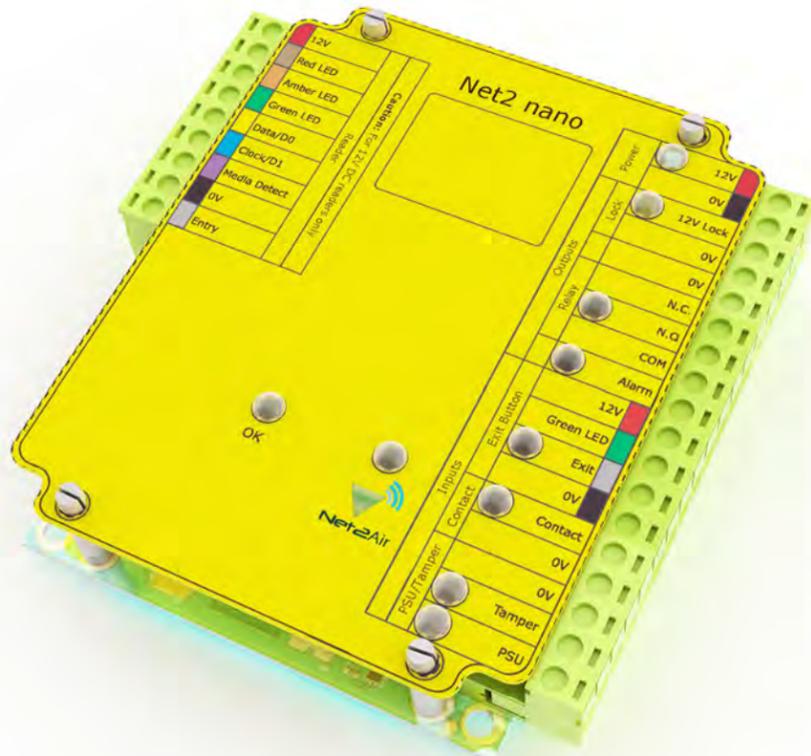

What is it?

Net2 is a PC based security system for controlling access through doors. Net2 allows users to be given access to particular areas at certain times. Because the system is networked, all administration can be done from a central point.

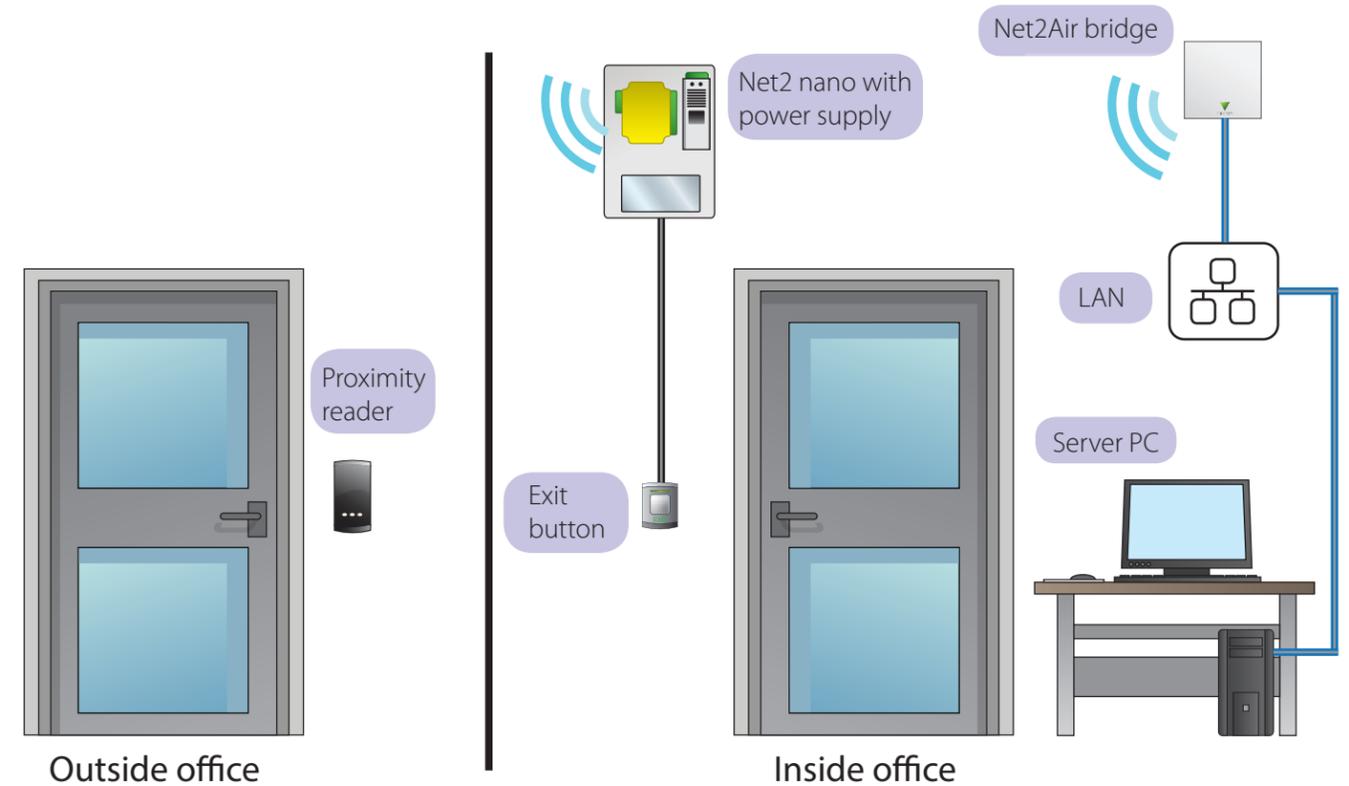

Net2 nano is one of a range of multiple Net2 control units. It communicates with Net2 software at a central point by a secure, low power radio link. This means that your installation is more cost effective and less disruptive as no cable is required to communicate between doors. In addition, Net2 nano benefits from unique ease of installation and configuration.

One Net2 nano controls a single door, gate or barrier. It may be installed as part of a Net2 installation alongside other Net2 nano, Net2 plus or Net2 PaxLock access control units. Simply connect a Net2Air Ethernet bridge to the central Net2 server PC and the Net2 software will discover and communicate with Net2 nano control units within range. A secure pairing procedure ensures that communications are private and restricted to the site.

As with all Net2 control units, Net2 nano is designed to work seamlessly in the event of communications failure. It will continue to permit or deny access to users as appropriate. Once communications are re-established the activity is reported back to the PC.

System Design

Net2 Nano Benefits

- Uses wireless technology
- No wiring needed between the control unit and the air bridge
- Diagnostic LEDs
- Color coded wiring labels
- Net2 nano, Net2 plus and Net2 PaxLock integrate on a same site
- Dedicated lock output
- Distributed intelligence
- Event buffering

Net2 PaxLock is a Complete Wireless Security Solution with Quick and Easy Installation

Net2 PaxLock will save you time and money on site, it can be installed quickly and comes pre-fit with a C keyway core, also available to fit SFIC keyway.

The battery powered unit comprises a networked access control system in a door handle, combining secure wireless technology with a stylish proximity reader.

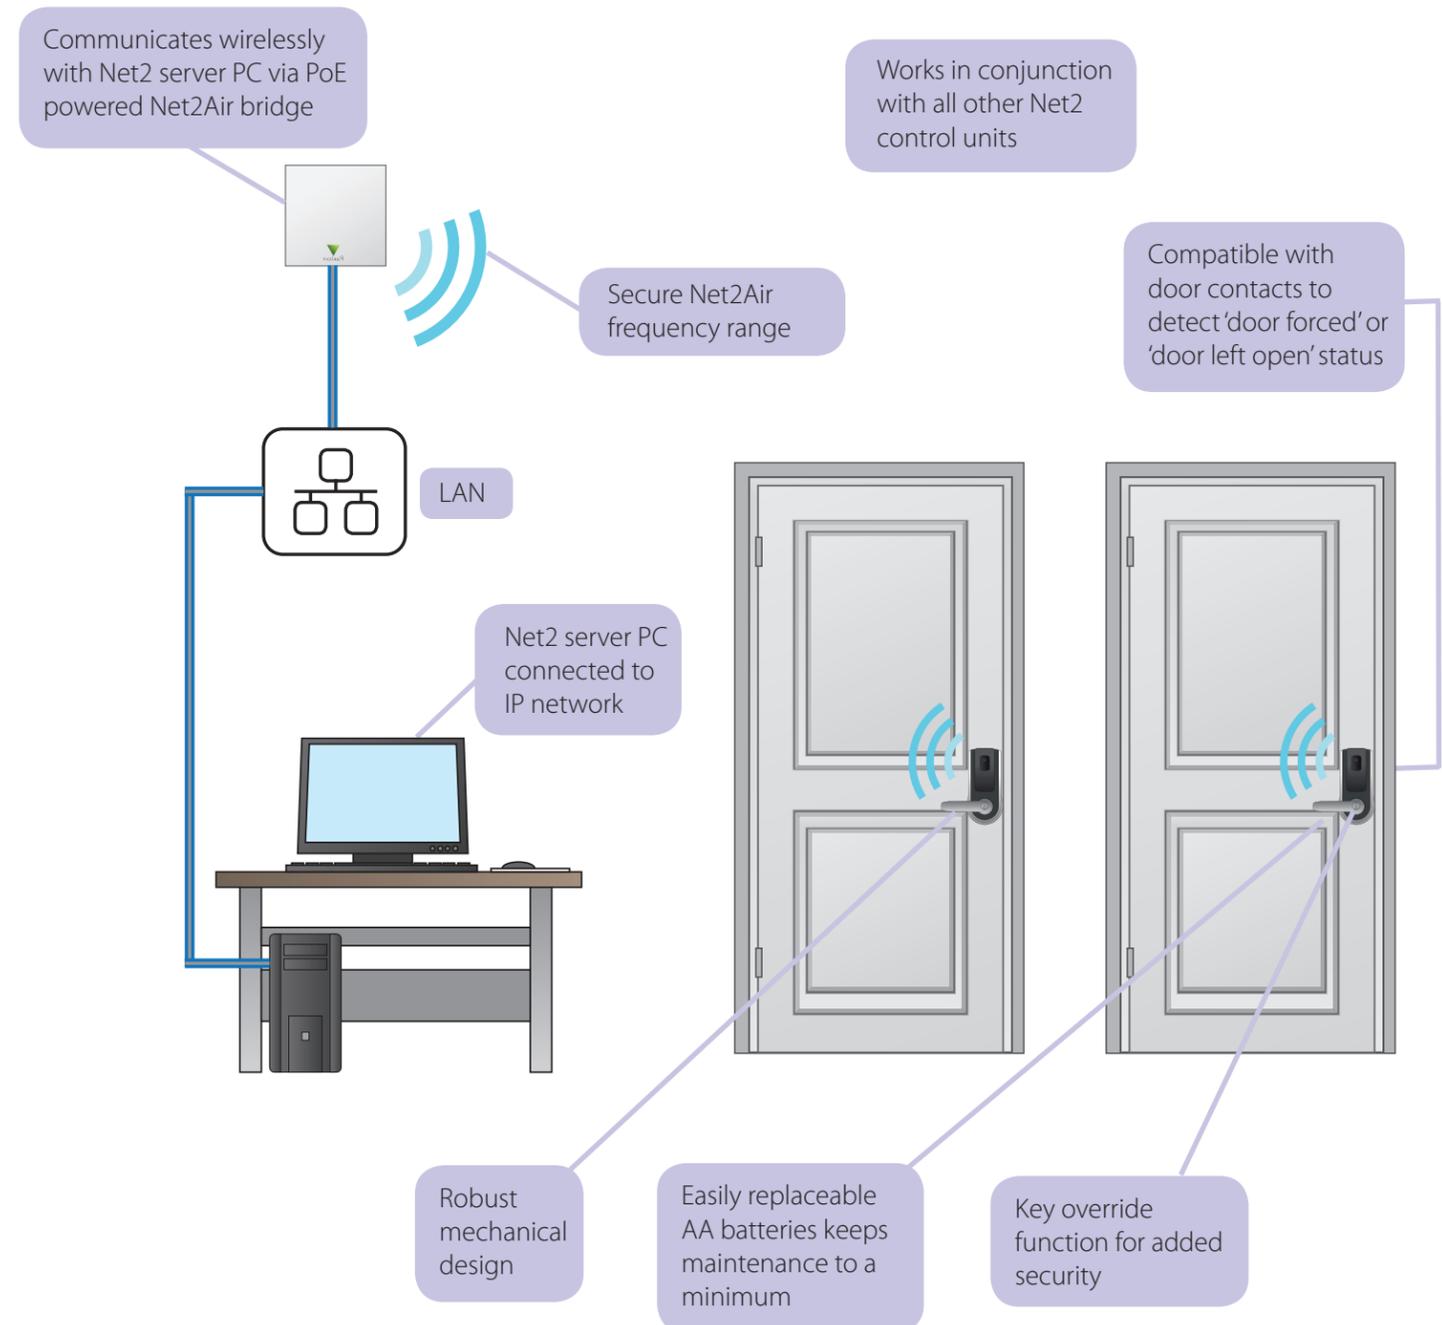

Key Benefits of Net2 PaxLock Over a Hardwired System

- No separate power supply needed
- No cabling to the door
- Minimal installation time
- ANSI Grade 1
- Reduced labor costs
- Ideal for retrofit installation
- UL-10C rated
- Contains Genuine HID Technology™ 1

How Does it Communicate?

Net2 PaxLock communicates with the Net2 software at a central point by a secure, low power radio link, and events are reported back to the server in real-time. It is designed for use with Net2Air Ethernet bridges to give the advantages of a wireless networked access control system. Each Net2Air bridge can detect Net2 PaxLock units within an average wireless radius range of up to 50ft (15m).

Net2 PaxLock is simple to use and quick to install because it is not wired into a power source, making it an ideal solution for internal doors.

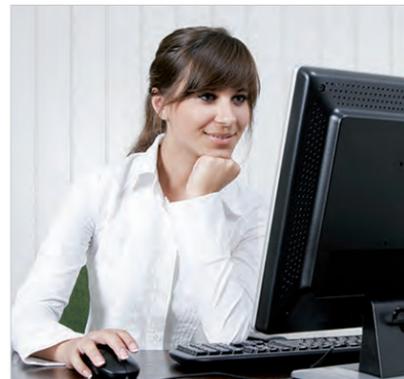

Net2 software overview

Net2 is an advanced PC based access control system that is used for controlling who goes where, and when. Within the Net2 architecture a user can add and delete credentials, run reports and configure the hardware to perform as required. The database which includes all credentials, door configurations, time zones, etc. is automatically downloaded to each access controller so the decisions are made locally at the door regardless of the computer condition. Net2 is a feature-rich solution to ensure the end user's requirements are exceeded. An example of the features included with the software are:

- Custom Reports
- Burglar Alarm Integration
- Camera Integration
- Video Intercom Integration
- Card Badging Design and Print
- Time and Attendance
- First in Building Unlock
- Input to Output Linking
- Elevator Control
- Graphical Maps
- Relay Latching
- Emergency Lockdown
- Text and Email Alerts
- 3rd Party SDK Integration

Net2 also allows unlicensed installations of client software on workstations throughout a facility so various departments can manage their part accordingly.

Net2 Access Control Software

Paxton offers two powerful levels of Net2 software for use with the Net2 access control system. With innovative functions, smart designs and effective programming; Net2 has been specifically developed to enhance your experience of using access control and make your life easier.

Net2|Lite

Simple and reliable access control software for Net2, ideal for getting your system up and running.

Net2|Pro

The intelligent Net2 software from Paxton. Net2 Pro offers great features that move beyond simple access control.

Enhanced door entry functionality for versatile security

Net2 Entry allows a person inside a building to identify a visitor before they are granted entry. Upon recognition, the person can grant or deny access via their intuitive touchscreen monitor, or via SIP with an office phone, smart phone, computer, or tablet¹.

Paxton's Net2 Entry combines audio, video, access control, and power via one Cat5 cable, now that's innovation. Net2 Entry can be used alongside Net2 access control to allow day-to-day access for users who have a Net2 token or PIN. A versatile grouping feature enables smart management of multiple Net2 Entry panels and monitors. The intuitive panel allows you to set up the display to show occupants by name, for straightforward building management.

How does it work?

- Quick and easy to install - one type of cable is needed between components
- Install using existing Cat5 infrastructure and connect via existing IP/PoE network
- Time and money saving - no need for separate power, communications, and video cables

For versatile building management

- Grouping feature enables smarter management and the separation of multiple Net2 Entry systems into multiple groups, allowing the control of selected monitors from selected panels. This is useful in applications such as gated communities, multi-tenant buildings, and office buildings
- Digital pan/tilt camera functionality to capture an angled view, for a diverse range of locations

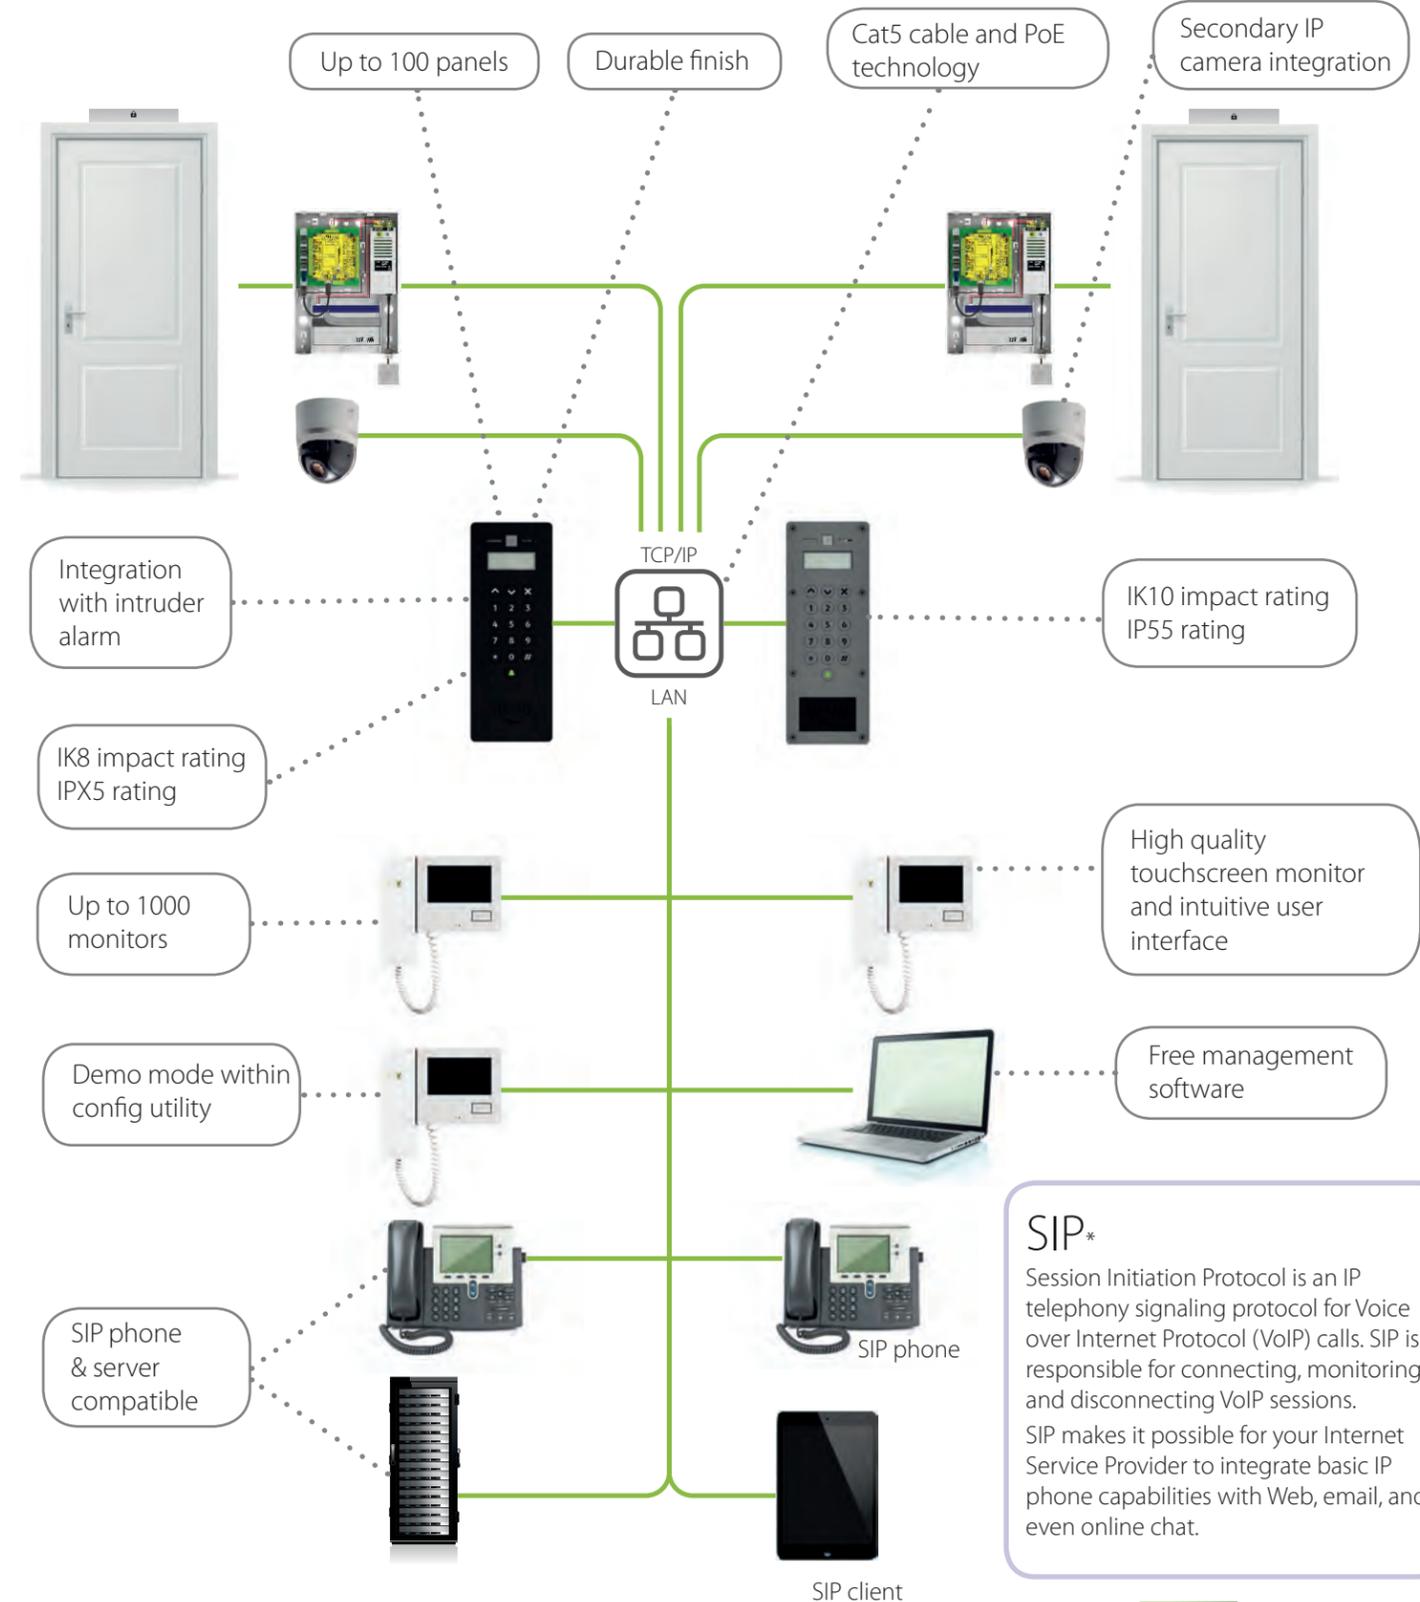

For a solution that meets your customers' needs

- Multi-format reader – reads Paxton, MIFARE®, and HID™ token technology²
- The standard panel features a high contrast backlit keypad

Products containing Genuine HID Technology™²

A simple one door solution

SIP*
 Session Initiation Protocol is an IP telephony signaling protocol for Voice over Internet Protocol (VoIP) calls. SIP is responsible for connecting, monitoring and disconnecting VoIP sessions. SIP makes it possible for your Internet Service Provider to integrate basic IP phone capabilities with Web, email, and even online chat.

*Net2 Entry is SIP compatible but Paxton does not provide SIP server software or SIP client devices

¹ Third party software required
² HID™ activation license required

P series reader

The P series range of readers is our most popular and comprises four readers ranging in size from the P38 to the P200. All the P series readers give increased read range when used in conjunction with a Hands-free interface and Hands-free tokens.

All P series readers are supplied with two fascias, one dark grey and one off-white. Other colors are available from your installer. These fascias can be replaced periodically to keep your installation looking brand new.

Energy saving reader

The Energy saving reader can be used as an electrical switch to control facilities such as lights and air conditioning. These facilities can be turned on by placing a valid proximity card in the holder on the front of the reader. Removing the card turns the equipment off. Of course only cards that have been given the necessary permissions can use the equipment.

Typical uses for the Energy saving reader include using access control cards to switch on lights, air conditioning or for health and safety applications.

Vandal resistant metal keypad

This solid metal, heavy duty keypad has been developed to stand up to abuse and is perfect for areas susceptible to vandalism. Its robust exterior also makes it suitable for physical environments where bumps and scrapes are inevitable.

The keypad incorporates a back-lit display and embossed numbers to facilitate the accurate entering of a PIN (or code) even at night. The back-light is also used to denote access permissions; flashing green for access granted and red for access denied.

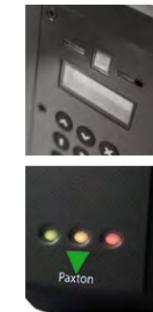

Vandal proof reader

As its name implies, the Vandal proof reader is suitable for vandal prone environments. The vandal resistance of this reader comes not from a chunky metal design, but from a unique form that allows the reader itself to be embedded in the wall and so not exposed to abuse. If you can't get to it, you can't damage it.

Paxton reader range w/ Genuine HID Technology™ 1

The Paxton reader range with Genuine HID Technology™ is a smart selection of readers containing HID™ technology, including the Proximity P50M, Proximity P75, Net2 PaxLock, and the next generation of Net2 Entry.

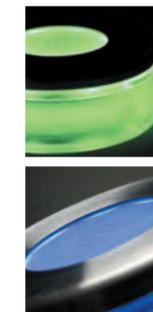

The multi-format readers can be configured to read standard 125kHz HID™ cards; ideal for large sites wanting to use existing cards for their Net2 access control system.

Marine reader

The Marine reader is housed in high quality marine grade stainless steel and is built to withstand the elements, as well as look elegant. Although it has been specifically designed for marine applications, such as yachts, it is suitable for use anywhere.

The high visibility blue LED lighting gives a stunning visual impact. It is also used to denote access permissions; flashing green for granted and red for denied.

Panel mount reader

Audio and video entry panels are widely used in residential and commercial buildings for controlling the access of visitors. Rather than having a separate proximity reader for controlling the access of residents or staff, the Panel mount reader is designed to be mounted within the door entry panel itself.

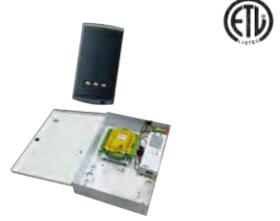

Net2 Caller ID/GSM reader

The Net2 Caller ID/GSM reader allows you to unlock a door using any phone as a key, by communicating via cell phone network. A registered user simply makes a call from their phone to the Net2 Caller ID/GSM reader and the door will unlock.

You can now secure gates and barriers or any remote site that's hard to reach. The Net2 Caller ID/GSM reader helps save money on security call outs and manned guarding.

Net2 PaxLock is a battery powered Net2 access control unit in a secure door handle and can be ordered ready to install with a C Keyway core or alternatively will fit with an SFIC core.

Communication between Net2 PaxLock and the Net2 server is done wirelessly through the Net2Air Ethernet bridges, providing all the advantages of a wireless access control system.

Net2 PaxLock is simple to use and quick to install because it has a self-contained power source, for internal doors.

* SFIC core not included

Standalone Access Systems – Compact

The Compact series are self-contained readers that include the components of an access control system for management of one door. All the wiring connects back to the reader. Compact systems can be installed to many doors over a site, all using the same cards.

STANDALONE COMPACT UNITS

Standalone Access Systems – Switch2

Switch2 is a single door control unit. The control unit stores the access permissions of the user and is mounted within the building. This makes the system suitable for high security applications.

Switch2 can be used with PROXIMITY, CARDLOCK or TOUCHLOCK readers. Switch2 can be installed to many doors over a site, all using the same tokens. Two readers can be connected to a single unit to give read-in and read-out access control.

STANDALONE SWITCH-BASED UNITS

 - 337-847-US Monitor Desk Mount Stand
 - 337-286-US Entry Monitor

Net2 PaxLock US demo case

Sales code 921-999-US
More information <http://paxton.info/1319>

- Included:
- 921-130-US Paxlock Schlage C Keyway – Galaxy handle
 - 477-268-US Net2Air USB Bridge
 - 930-010-US Net2 Pro software disc
 - 514-326-US USB Enrollment Reader
 - Sample pack of tokens

SDK

The Net2 SDK (software development kit) was created to increase the flexibility of a Net2 access control system. The simplicity of Net2 means that it is user friendly, but occasionally our customers need a little more from their software. The SDK acts as an interface between the Net2 server and external databases. C# developers can create custom applications that integrate with the Net2 access control system, allowing customers to get exactly what they need from Net2.
